

Freight Portal

The web environment www.veoportaal.ee brings the providers of freight services into contact with companies and private persons in need of transport. The portal provides free access to the information related to freight services, cargo and bus tours.

Here you can find a suitable provider of international or domestic freight service in a couple of minutes. If you are a provider of freight service yourself, you will find here the information of cargo waiting for transportation. Our portal includes real-time information of freight carriages and bus tours that are already in progress or scheduled, as well as information of free cargo space, transport schedules, prices and available means of transport. The Freight Portal does not mediate transportation as a forwarding agent; the interested party shall take contact directly with the other party himself in order to negotiate mutually the terms and conditions related to freight, cargo or bus tours. Offers can be made via e-mail or by phone.

In this web environment, the companies organizing international transport as well as Estonian domestic carriers can inform their potential clients of free carriage resource on a specific period and route. Carrier will be visible to everybody with his vehicles and carriages. Clients in turn can offer work to the carriers for specific periods and carriage routes or directions, because as the potential clients they are aware of free or partially used carriage resource through the portal. The Freight Portal also enables the clients to inform carriers of their transportation need in real time.

In addition to freight offers, the carriers can search cargo and submit their own offers for its transportation to the required destination.

Find necessary data in a moment from a vast database

As it is not important for the client, who will transport his cargo to the destination point under suitable conditions, our portal enables to search the transportation first, and the specific carrier will be reached when the selection has been made from freight offers. Sorting of freight and cargo on the basis of markers specified by the user will enable to find instantly the most suitable offers.

User of the portal will save time

The portal will save time and money of the offerers of freight services as well as the purchasers of freight services. There is no more need to spend time for searching a suitable carrier from information directories or waste money on calls to information telephones. User of the portal will find immediately the object of his search – a suitable carrier or cargo. When this has been found, the offerer must be contacted using the contact data displayed in the portal.

Freight resource needing application is visible to everybody

Freight resource of a carrier, that is free in real time or in close future, is visible to everybody. This enables the carrier to fill better the loading space and/or use carrying capacity of the vehicle, thus ensuring better loading of means and units of transport.

Transportation need is visible to everybody

In case of need to transport the cargo from one point to another it is sufficient to upload your transportation need. After that, offers will start to arrive to your e-mail address or you will be contacted by phone.

Bus owners will also be available to the clients

For bus owners the Freight Portal provides an opportunity to be visible to everybody with the description and photo of their vehicle. The portal enables to find new clients, expand the customer base and perform more tours with single clients.

Potential client of a bus tour will find the carrier

Clients of bus tours will get overview of the available means of transport and readiness of their drivers/owners to make shorter or longer bus tours.

Uploading and use of information is basing on mutual trust

Operation of www.veoportaal.ee and the proceeding benefit to the parties is basing on mutual trust. The parties in turn should make all efforts to ensure that the uploaded information is correct in real time, i.e. the whole information is actually valid and has not lost its value in the course of time. For this purpose the users must enter immediately any actual changes related to the use of freight resource, cargo and bus tours. If an uploaded offer of freight, cargo or bus tour is no longer valid, it must be removed immediately or deactivated, to avoid confusion of other users of the portal.

Operative and professional management of information in the portal will increase reliability of the company and help to find new clients. Offerers of cargo can increase their value as clients for the carriers through real-time offers.

The Freight Portal as an environment mediating information related to freight, cargo and tours does not assume responsibility for real-time validity and correctness of the information displayed in the portal. Information is entered by carriers and clients, who update it according to the changing situation.

Two user profiles

The Freight Portal can be visited as a registered or unregistered user. Unregistered users can search necessary information free of charge. Information about freight and cargo can be uploaded only by registered users. For this, an offer form shall be filled in. After entry of the information related to freight or cargo and saving of the entered data on the work forms of the Freight Portal the whole information will be visible to everybody in real time.

Register and start to use immediately

Registration is quick and convenient. After payment of invoice through an internet bank a password shall be sent to your e-mail address and you can start to upload data.

Why to register as a user of the Freight Portal?
